

Micro Focus ALM Administration

An Orasi Training Course

Course Overview

Micro Focus Application Lifecycle Management (ALM) is a centralized smart repository that tracks the entire testing lifecycle, including requirements management, test authoring, test execution, defect tracking, and data reporting and analysis. Effectively managing Micro Focus ALM domains, projects, licenses, and customizations can be a challenging task for organizations as they expand into multiple projects that are concurrently in flight. A properly configured Micro Focus ALM instance can enforce organizational process workflows and help generate more meaningful cross-project reports that were otherwise unattainable.

Orasi delivers a comprehensive Micro Focus ALM Administration instructor-led class to help organizations meet today's Micro Focus ALM project topology and customization challenges. Micro Focus ALM Administration is a training opportunity for both Micro Focus ALM site administrators and Micro Focus ALM project administrators and is presented with a balance of lecture and hands-on exercises.

Duration: 1 day

Class Limit: 10 students

Labs: 40% of class time

Prerequisite: Micro Focus ALM End User Basic Training or equivalent is encouraged but not required

Target Audience

- Micro Focus ALM Site Administrators
- Micro Focus ALM Project Administrators

Goals

- Create domains, projects, and templates (Micro Focus ALM premier only)
- Manage Micro Focus ALM licenses and connections
- Distribute Micro Focus ALM groups and permissions
- Manage Micro Focus ALM project fields and list values
