

Hosting: Micro Focus ALM and Micro Focus LoadRunner Enterprise

For more than 17 years, Orasi Software has consistently helped its customers implement and integrate best-practices software testing environments to reduce the cost and risk of software failures. To further promote quality assurance and reduce strain on testing teams, Orasi offers fully managed, secure cloud-based hosting for Micro Focus Application Lifecycle Management (Micro Focus ALM) and Micro Focus LoadRunner Enterprise. Each client environment is administered by specialists with deep experience ensuring reliability and performance in the cloud.

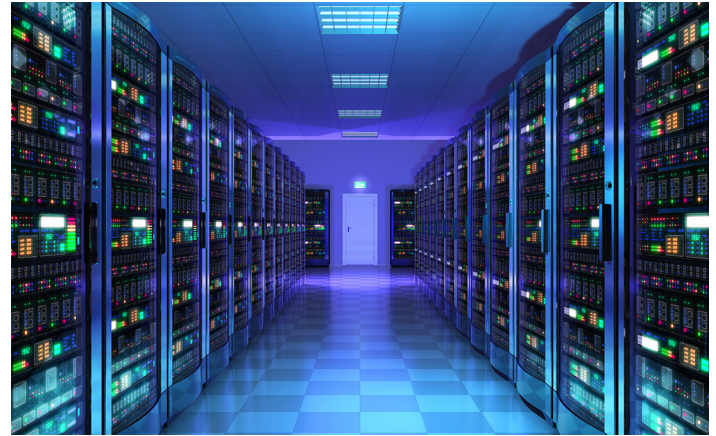

Why Cloud Hosting?

Secure, managed cloud hosting enables organizations to attain two beneficial goals:

1. Offload hosting and management (including updates) of non-critical software lab applications, freeing internal IT resources for mission-critical application management.
2. Reduce investment in server hardware and maintenance and turn storage into an operating expense rather than a capital item.

Included with Orasi Hosting Services

-  Single Dedicated Tenant
-  Site-to-Site VPN (or ACL)
-  Application Migration and Upgrade (Initial and Ongoing)
-  Operating System and Database Patching, Backup and Restore, Disaster Recovery
-  Security and Privacy Built Directly into the Azure Platform
-  Management and Team Peace of Mind

The Orasi Difference

Leveraging the security, performance, and availability of Microsoft Azure—paired with proactive management by seasoned cloud experts and engineers—Orasi’s Hosting Service gives decision makers and their teams superior flexibility, power and performance with welcome peace of mind.

As a separate offering, Orasi also offers professional expertise to administer ALM and its projects, from generating Monthly Operational Reports to writing macros/scripts and managing ALM workflow.

“

“Orasi saved our firm \$500,000 over three years by transitioning Micro Focus ALM hosting from another provider to their hosted cloud service.”
