

# Orasi Analytics & Tableau— Unleashing the Power of Data, Together

## Data Analytics: Finding the Answer to “Why?”

You have data flying in from various directions, in different formats and sizes. You have a million questions, and the answers are buried somewhere in the data. You chose Tableau, the market leading visual analytics platform, to uncover the hidden potential in your data. However, even with all the fancy charts and graphs, you are unable to answer the most basic question, “Why?”

## Answering the “Why”—It’s What We Do

Our experienced team of certified Tableau consultants are not only technically proficient with the Tableau platform; they immerse themselves in your data. This approach allows us to move beyond focusing on the technology improvements in the platform. More importantly, we come to understand your data as well as (or better than) your stakeholders. So, when all the graphs and visualizations are complete, we are uniquely positioned to work with your stakeholders to answer the Why? Questions that, despite your extensive exploration of the issue, you still cannot answer.

## Onshore Consulting Services Designed Around You

No single outsourcing model is right for every company: some need personnel on-site, some need a larger staff but do not have facilities to house them, and still others are more concerned with cost. In response to these varied requirements, Orasi provides a U.S.-based analytics services model that includes:

- On-site analytics consultants
- Onshore analytics consultants

Through its U.S.-based services model, Orasi can optimize the mix of personnel and services for your Tableau-powered projects while keeping expenses within the client’s budget allocations.

## Orasi Tableau Services

### Analytics Foundation

Are you ready to reap the value of self-service visual analytics and watch users enthusiastically embrace it across your company? Let Orasi's expertise with the world's most powerful analytics platform help you develop a foundation and foster a culture that smooths the way to analytics adoption. Our experts will come to your premises and engage with your team, helping them identify use cases, develop plans, and find constructive solutions to their analytics challenges.

### Analytics Quick Start Program

For companies seeking to fast track their introduction to data analytics—or to demonstrate value to reluctant stakeholders—Orasi offers its Quick Start Program. In just five days, Orasi experts coach your team to identify a real-world use case for one of your firm's data analytics challenges and then lead a heads-down session to develop analytical solutions that drive meaningful, actionable insight.

### Analytics as a Service

As adoption of the cloud literally skyrockets, business leaders are recognizing its benefits for analyzing data. Widely recognized as the most practical approach for analytics, the cloud eliminates the need for firms to deploy and maintain servers—and removes processing constraints that hamper on-premise analytics deployments.

To provide the scalability, security and data redundancy that best practices dictate, Orasi offers analytics as a service for the entire data analytics pipeline. Our rigorously trained and certified IT professionals put analytics to work for your business with no drain on your time or resources.

### Tableau Classroom Training

Drive a culture of analytics with the help of an Orasi Tableau certified trainer. Whether training is delivered at your location, virtually, or at our facility; Orasi's experts provide two full days of in-depth instruction, teaching your team and coaching them to a level of functional proficiency in Tableau. (Tableau Desktop I: Fundamentals and Tableau Desktop II: Intermediate offered; courses can be consecutive, as well.)

### Visualization Best Practices

Need to get your dashboards from good to great? Orasi's consultants incorporate visual best practices into your existing or new Tableau dashboards. Leveraging the Monitor-Analyze-Detail (MAD) framework, our consultants work with your teams to redesign or create new dashboards and maximize usage and efficiency.
